

The Cosmology of Freedom

Nevilles *The Cosmology of Freedom* corrects the tendency to believe that freedom consists in one thing alone, for instance not being constrained, or being able to choose between live options, or participating in a democratic political process. He lays out in systematic fashion the connections between personal dimensions of freedom, such as external liberty (Hobbes), the ability to act on the basis of ones intentions (Spinoza), choice between live options (James), and creativity (Whitehead), and social dimensions of freedom, such as opportunity (Du Bois), social pluralism (Dewey), integral life-style (Tillich), and participatory politics (Dahl). Discerning the nuances of these dimensions of freedom, it becomes a matter of experience and empirical investigation to determine in specific circumstance whether, in what senses, and to what degree a person or society is free. To distinguish and to relate these senses of freedom, a broad philosophical perspective is required. Neville provides a functional philosophical cosmology that shows how all the senses of freedom are functions of the natural cosmos. In conjunction with his theory of divine creation in *God the Creator*, this book is an important argument for reconciling human freedom and divine creativity.
